## Team Roles

Our Specific roles in this project

01

# Project Narrative

What is all about?

# Why Care(*Circle*)

## Increasingly Dangerous Digital Landscape

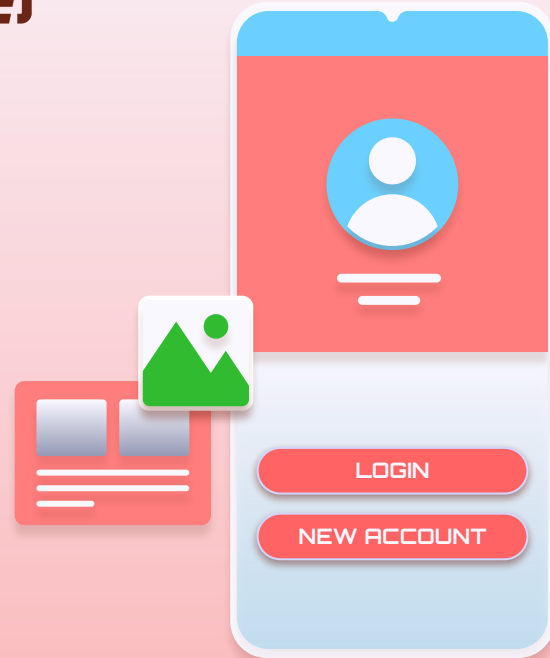

- Children and youth face growing risks online, especially via mobile devices

## Proposal For a Solution

- Designed to help parents and trusted guardians ensure children's safety

## Importance of the Initiative

- Vital for protecting children in today's digital world

# Existing Solutions

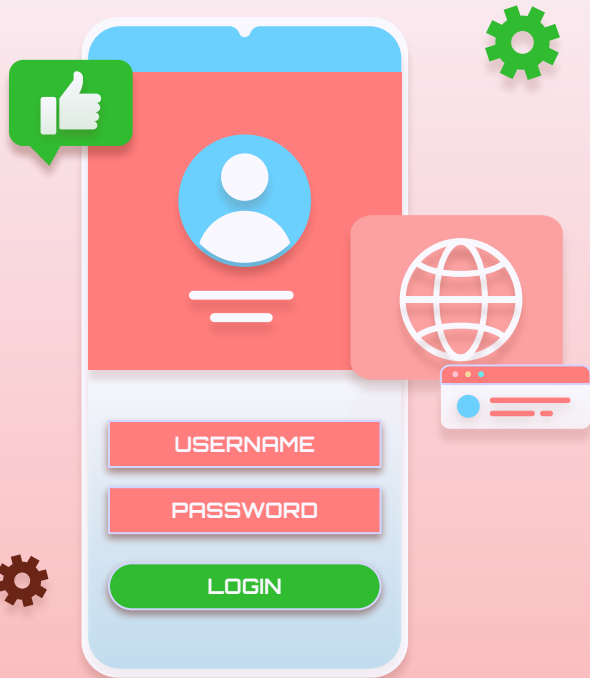

## mSpy

- Widely used parental monitoring app
- Tracks children's activities, including text messages and social media usage
- Offers RT monitoring for comprehensive, on-demand insight

## Bark

- Focuses on detecting potentially risky content in children's online activities
- Scans text messages, emails, and social media for harmful content
- Alerts parents only when harmful content is detected

# Drawbacks

## Criticism of Parental Control Apps

- Many apps face backlash for invading children's privacy
- Erodes trust between parents and children

## Surveillance Issues

- Apps provide unrestricted access to children's messaging and social media activity
- Can damage open communication about online safety and activities

# Our Solution

## CareCircle

A balanced parental monitoring solution.

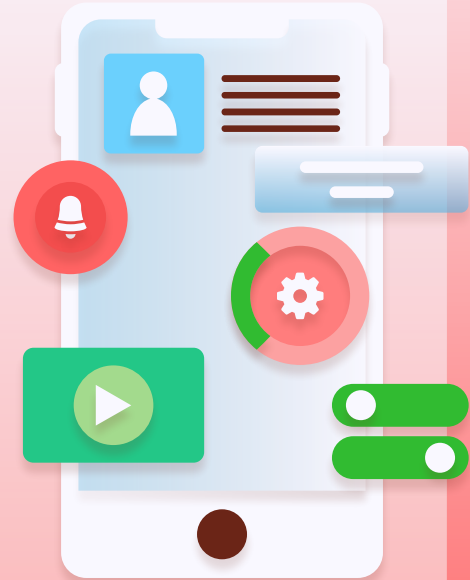

### Goal

Reduce harm while supporting children's independence and privacy.

02

# UI Overview

Overview of the app and  
key functionalities

# App Overview

## Login

Input fields for  
user  
authentication

## Dashboard

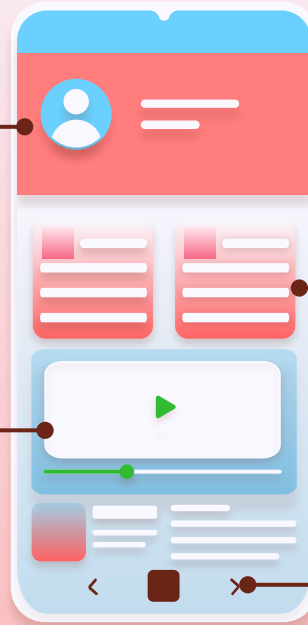

Features two  
separate  
interfaces for  
parent and  
child

## Settings

Account  
settings and  
safety

## Loading

Minimal design  
for feedback  
during page  
processing

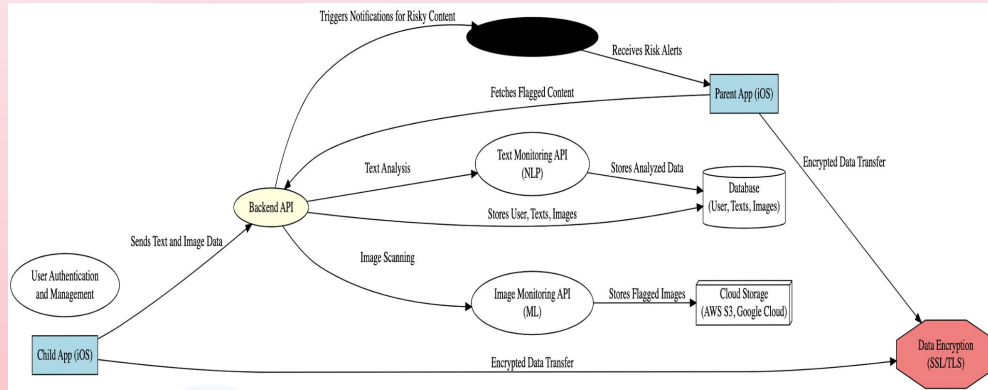

# System Architecture

**Backend:** AI message scanning and harmful content flagging; connects to a NoSQL database.

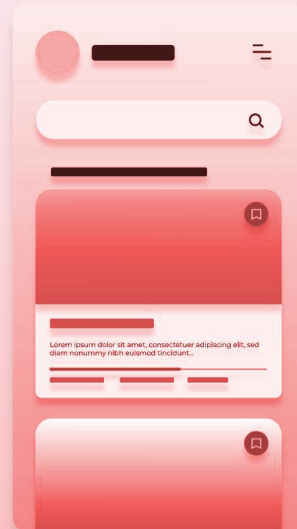

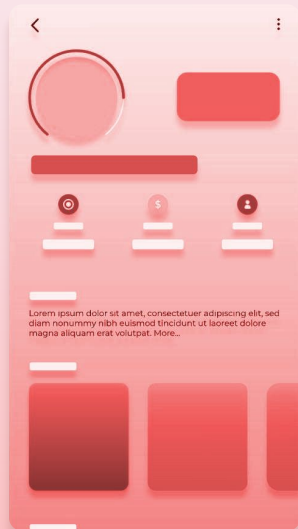

**Database:** Stores harmful words, user profiles, and flagged messages

## Front-end:

- **Child Dash:** Manages consent and settings
- **Parent Dash:** Monitors flagged messages and notifications.

# Team Roles

# Thank you!
